

# Stump the Chump!

How random ARE you?

## **To play:**

1. Type in a sequence of 50 zeros and ones, trying to mimic a sequence of random coin tosses, where zero is tails and one is heads.
2. The computer generates a real random sequence.
3. Both sequences are presented to a Professor of Statistics, who uses his expertise to choose the “real” random sequence.

**To score:** You get 100 points if the professor chooses your sequence!
